

Bar Extreme RPR

Fast establishing golf courses that are as strong as iron

- Very fast establishment.
- Less annual meadow grass (*Poa annua*) ingression.
- Most suitable for overseeding.
- Less damage due to regenerating capacity.
- Higher playing intensity allowed.
- Green all year round.

Yellow Jacket Water Manager inside!

The world's first Seed Enhancement Technology ensures precisely the right balance of moisture for both optimum germination and establishment. Yellow Jacket Water Manager was developed by Aquatrols in cooperation with Barenbrug. When it is irrigated, the substance used to enhance the seed is released into the soil, where it adheres to grains of sand, creating a Plant Survival Zone. Besides retaining water, this zone also regulates the amount of water around each seed, optimising the growing conditions to guarantee vital grass plants that will develop quickly.

Golf

At Barenbrug we have been breeding grasses for golf courses for more than half a century. So Barenbrug golf grass mixtures are well-developed and have conquered the market worldwide. To ensure that our new products are used in the best way possible, we work closely with greenkeepers and golf course architects.

- Green
- Tee
- Fairway
- Rough

Characteristics

Close mowing tolerance

Higher resistance to diseases

Requires less irrigation

Requires less fertilisers

Requires less mowing

Higher wear tolerance in summer

Higher wear tolerance in winter

Higher ball speeds

Fast establishment

Self-repairing

Higher turf density

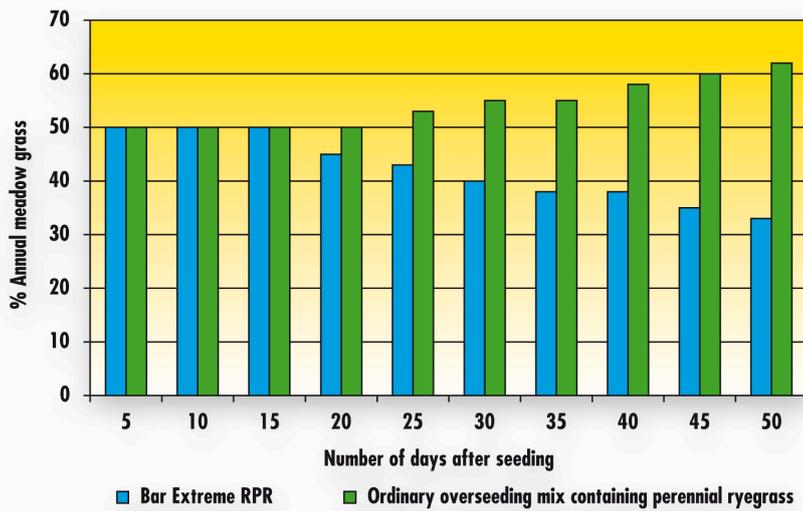

Year round green color

Higher salt tolerance

Extremely fast establishing grass

The high concentration of fine-leaved perennial ryegrass combined with RPR technology makes for a very fast establishing grass mix. The fine-leaved perennial ryegrass contained in Bar Extreme RPR grows many times faster than smooth meadow grass. The combination with RPR makes it as strong as iron.

Less annual meadow grass

RPR is as strong as smooth meadow grass, but is very fast establishing. It also reduces the ingress of annual meadow grass in your tee or fairway, because of the reduced risk of it establishing in your grass sward.

For more about annual meadow grass go to www.barenbrug.biz/annual-meadow-grass.

Primarily intended for overseeding

Consisting of 100% perennial ryegrass, the fast-establishing Bar Extreme RPR is primarily intended for overseeding. A combination of red fescue and smooth meadow grass is usually used for seeding.

Regenerating

The RPR mix produces determinate stolons that create a kind of netting in the sward, linking the individual grass plants. This means fewer divots, so less damage. The RPR technology ensures a regenerating, very fast establishing grass sward.

Golf

At Barenbrug we have been breeding grasses for golf courses for more than half a century. So Barenbrug golf grass mixtures are well-developed and have conquered the market worldwide. To ensure that our new products are used in the best way possible, we work closely with greenkeepers and golf course architects.

Higher player intensity

The determinate stolons in RPR create a natural network, like a kind of netting, resulting in a fast establishing sward. So instead of individual grass plants, every grassplant in a RPR sward is linked to another grass plant and to the soil, making for a dense sward. The grass will be held down better, with less risk of turf being torn up by golf clubs on tees or fairways, allowing a higher playing intensity.

Green all year round

This fast establishing RPR mix is particularly suitable for overseeding. Your sward can be overseeded up to three months longer than, say, a Bar Fairway sward. As Bar Extreme RPR is so suitable for overseeding, your golf course will last longer and will be green all year round. And that of course means more turnover for you.

Specifications

Speed of establishment	very fast
Fertiliser requirement	high
Speed of growth	very fast
Sowing rate	25-30 gr/m ²
Mowing height	from 10 mm
Package	15 kg
Sowing depth	0.5 - 1.0 cm

Composition

- 50% RPR
- 50% Lolium perenne (fine leaved)
