

## Bar Power RPR

### Lawns strong as iron

- RPR® technology inside!
- Fast and strong.
- Regenerating ability due to stolons.
- For new and overseeding.
- High disease resistance.
- Less weeds.
- High turf density.
- Green Earth label - for sustainable maintenance

**REGENERATING**

*Perennial Ryegrass*

#### RPR® technology inside

RPR® is a self-regenerating perennial ryegrass that spreads via determinate stolons, making it many times stronger than other types of perennial ryegrass, yet with the same high growth rate. The result is a self-regenerating perennial ryegrass with good wear resistance and a high optical quality, making it suitable for lawns, parks and grass plots. RPR® has already proven its success in sports fields and golf courses.

For more information on the RPR® technology, go to [www.barenbrug.be/rpr](http://www.barenbrug.be/rpr).

**Fast and strong**

## Landscape & Lawn

Turf grass plays an important part in our lives. It grows in our gardens and parks. It is not only its use in practice that is important, but also its esthetic and its ability to purify air and water. A carefully considered grass seed mixture will increase the pleasure you get from your ornamental lawn for many years.

- Lawns
- Landscaping
- Roadsides
- Airports

### Characteristics

Suitable for ornamental value

Suitable for playing lawns

Suitable for sport lawns

Suitable for parks

Higher wear tolerance

Tolerant to drought

Fast establishment

Shade

Fine leaved

Low maintenance

Erosion control

Requires less irrigation

Requires less fertilisers

Requires less pesticides

Requires less mowing

**BARENBRUG**

Bar Power RPR® is the first type of grass to combine strength and speed. You no longer have to wait ages for your lawn to develop enough for you to walk across it. The sward will soon be dense enough to tolerate intensive use. Usually smooth-stalked meadow grass is used to ensure strength. That is then combined with perennial ryegrass to promote fast establishment. The resultant mixture will germinate and establish very quickly, but its wear tolerance will leave something to be desired. Bar Power RPR® combines speed and strength to ensure good wear tolerance.

## Landscape & Lawn

Turf grass plays an important part in our lives. It grows in our gardens and parks. It is not only its use in practice that is important, but also its esthetic and its ability to purify air and water. A carefully considered grass seed mixture will increase the pleasure you get from your ornamental lawn for many years.

## INTENSE TRAFFIC TOLERANCE - OHIO STATE UNIVERSITY

### Self-regenerating

RPR® spreads via determinate stolons that create a kind of netting in the sward, linking all the individual grass plants. This reduces the risk of the grass being kicked up, and hence the risk of damage, making your sward as strong as iron. And if it should suffer some damage after all, the RPR®'s self-regenerating capacity will soon repair it.

Low maintenance

Erosion control

Requires less irrigation

Requires less fertilisers

Requires less pesticides

Requires less mowing

### Wide range of applications

Bar Power RPR® can be used for many purposes, e.g. a lawn, a local football pitch or a park. It is also very suitable for much-used paths. Also important, besides great strength, is of course ornamental value – and that’s another favourable characteristic of Bar Power RPR®. The outcome is a fast-establishing, strong, attractive sward. Bar Power RPR® does well on soils of many kinds – a major advantage for e.g. professional gardeners.

### For seeding and overseeding

Sustainable use of grass seed is very important. Bar Power RPR® can be used for both seeding and overseeding. So you will save money by having to buy only one mixture. With many standard grass mixtures you have to wait until May, but Bar Power RPR® can be seeded in March already. Overseeding is important for keeping your sward in good quality. If you use a different grass mixture to overseed your sward you may end up with differences in colour. Because Bar Power RPR® can be used for both seeding and overseeding you will have an attractive green lawn of top quality all the year round.

<b>RPR</b>	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
<b>Regular lawn mixture</b>	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

### High disease resistance

Bar Power RPR® comprises fine-leaved perennial ryegrass, RPR® technology, red fescue and red fescue with fine runners. This strong mixture creates a dense sward with a high disease resistance thanks to the red fescue.

### Less weed growth

With its determinate stolons, Bar Power RPR® forms a very dense sward in which weeds and undesired grasses have very little opportunity to establish. Bar Power RPR®’s combination of strength and speed is a major advantage in the struggle against weeds and undesired grasses. Annual meadow grass may completely spoil a lawn. Once it’s established, it’s extremely difficult to get rid of it. It may look attractively green, but it can damage your entire lawn. Bar Power RPR® can defeat annual meadow grass.

For more information on annual meadow grass, go to [www.barenbrug.biz/poa-annua](http://www.barenbrug.biz/poa-annua)

Low maintenance

Erosion control

Requires less irrigation

Requires less fertilisers

Requires less pesticides

Requires less mowing

### Fast development of a dense sward

The perennial ryegrass contained in Bar Power RPR® establishes very quickly, while the red fescue ensures a very dense sward. The grass plants will germinate in less than no time after seeding, creating a dense sward with a high wear tolerance.

### Green Earth label - for sustainable maintenance

Barenbrug's aim, besides being a pioneer in improving grasses, is for its developments to contribute towards a Green Earth on which future generations will also be able to enjoy sports and other forms of recreation. This is why the company introduced its Green Earth label, a quality mark that helps managers of public green spaces use and manage grass in a more sustainable way by making less use of water, fertilisers and pesticides and mowing the grass less often.

### Specifications

Speed of establishment	fast
Nitrogen requirement	normal
Speed of growth	fast
Sowing rate	2.0-2.5 kg/100m <sup>2</sup>
Mowing height	20-35 mm
Packaging	5, 15 kg

### Composition

- 30% RPR
- 30% Lolium perenne
- 20% Festuca rubra commutata
- 10% Festuca rubra
- 10% Poa pratensis
